Risk/Return Summary - Commonwealth Australia/New Zealand Fund

Commonwealth Australia/New Zealand Fund				
Summary				
Commonwealth Australia/New Zealand Fund (CNZLX)				
Investment Objective				
The investment objective of the Commonwealth Australia/New Zealand Fund (the "Australia/New Zealand Fund") is to provide long-term capital appreciation and current income.				
Fees and Expenses of the Fund				
This table describes the fees and expenses you may pay if you buy and hold shares of the Australia/New Zealand Fund.				
Shareholder Fees (fees paid directly from your investment)				
Shareholder Fees	Commonwealth Australia/New Zealand Fund			
	Commonwealth Australia/New Zealand Fund			
Redemption Fee (as a percentage of the amount redeemed or exchanged within 14 days and a \$15 fee for redemptions paid by wire)				2.00%
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)				
Annual Fund Operating Expenses	Commonwealth Australia/New Zealand Fund			
	Commonwealth Australia/New Zealand Fund			
Management Fee			0.75%	
Distribution (12b-1) Fees			0.25%	[1]
Other Expenses			1.59%	
Total Annual Fund Operating Expenses			2.59%	
[1] The Australia/New Zealand Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.				
Example:				
The following example is intended to help you compare the cost of investing in the Australia/New Zealand Fund with the cost of investing in other mutual funds.				
The example assumes that you invest \$10,000 in the Australia/New Zealand Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Australia/New Zealand Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:				
Expense Example	1 Year	3 Years	5 Years	10 Years
Commonwealth Australia/New Zealand Fund Commonwealth Australia/New Zealand Fund USD (\$)	262	805	1,375	2,925
Portfolio Turnover				

The Australia/New Zealand Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Australia/New Zealand Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Australia/New Zealand Fund’s performance. During the most recent fiscal year, the Australia/New Zealand Fund’s portfolio turnover rate was 31% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Australia/New Zealand Fund invests at least 80% of its net assets in the securities of, and depositary receipts (including American Depositary Receipts (“ADRs”), Global Depositary Receipts (“GDRs”), and European Depositary Receipts (“EDRs”)) represented by, Australian and New Zealand issuers that are tied economically to Australia or New Zealand. The Australia/New Zealand Fund considers an issuer to be an Australian or New Zealand issuer and thus tied economically to Australia or New Zealand if: (1) the issuer is organized under Australia or New Zealand law; (2) the securities of the issuer are listed on Australia or New Zealand stock exchanges regardless of the country in which the issuer is organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold in Australia or New Zealand; or (4) the securities are issued or guaranteed by government entities of Australia or New Zealand. The Australia/New Zealand Fund invests primarily in debt and equity securities of Australian/New Zealand issuers. The Australia/New Zealand Fund may also consider an issuer to be an Australian or New Zealand issuer if it issues securities denominated in the local currency of either Australia or New Zealand. The Australia/New Zealand Fund’s equity investments may include common and preferred stock and securities convertible into common stock. The Australia/New Zealand Fund’s investments may include issuers of any market capitalization. In addition, the Australia/New Zealand Fund may invest in ADRs, which are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Australia/New Zealand Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated.

The Australia/New Zealand Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds.

FCA Corp, the Australia/New Zealand Fund’s investment adviser, does not attempt to maintain equal or set allocations to Australia or New Zealand. Rather, the Australia/New Zealand Fund, from time to time, invests different percentages of its assets in Australia and New Zealand, depending on available investment opportunities and economic and market conditions. The Australia/New Zealand Fund may invest in companies that focus on natural resources production, refining and development.

The Australia/New Zealand Fund’s investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations (“NRSROs”). The determination as to whether to make a particular investment in debt securities is based on FCA Corp’s analysis of the risk of the debt security versus the price and return of such debt security. The Australia/New Zealand Fund’s debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., “junk bonds”) based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Australia/New Zealand Fund may also enter into derivative transactions. The Australia/New Zealand Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Australia/New Zealand Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Australia/New Zealand Fund also may enter into foreign currency forward contracts. The Australia/New Zealand Fund may also engage in borrowing for cash management purposes. The Australia/New Zealand Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Australia/New Zealand Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company’s growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Australia/New Zealand Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company’s growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;
- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;
- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Fund, or in the course of adjusting the Australia/New Zealand Fund’s emphasis(es) on a given country(ies) or sector(s). The Australia/New Zealand Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Principal Risks

An investment in the Australia/New Zealand Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):

Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Australia/New Zealand Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Australia/New Zealand Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Australia/New Zealand Fund’s portfolio investments, and may affect the Australia/New Zealand Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.

Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Australia/New Zealand Fund’s net asset value and, therefore, may increase the volatility of the Australia/New Zealand Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Australia/New Zealand Fund’s total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Australia/New Zealand Fund.

Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Australia/New Zealand Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Australia/New Zealand Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer’s financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Australia/New Zealand Fund’s investments in fixed income securities denominated in a foreign currency. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Australia/New Zealand Fund may invest in securities rated investment-grade or below investment-grade (“junk bonds”), and it may invest in debt securities that are of comparable quality that are not rated. The Australia/New Zealand Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Australia/New Zealand Fund uses derivatives to “hedge” the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Australia/New Zealand Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Foreign Securities Risk. Foreign securities risks to which the Australia/New Zealand Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Australia/New Zealand Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Australia/New Zealand Fund to liquidate positions. This in turn may cause delays in the Australia/New Zealand Fund’s receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange.

Management Risk. FCA Corp’s judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp’s reliance on investment strategy judgments about the “growth” potential of particular companies or the relative “value” of particular securities may prove to be incorrect or inconsistent with the overall market’s assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Australia/New Zealand Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Australia/New Zealand Fund’s strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Australia/New Zealand Fund. Additionally, the Australia/New Zealand Fund’s direct operations could negatively impact the Australia/New Zealand Fund’s performance. For instance, because the Australia/New Zealand Fund’s asset base may be considered small relative to other mutual funds, the Australia/New Zealand Fund will operate with correspondingly higher total annual operating expenses. To the extent the Australia/New Zealand Fund’s assets are not increased and the Australia/New Zealand Fund’s expense ratios are not decreased, the Australia/New Zealand Fund’s expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Australia/New Zealand. The Australia/New Zealand Fund, by focusing its investments on Australian and New Zealand issuers, may be exposed to additional risks that other funds that invest in securities of issuers in a broader region may not be exposed. For instance, financial, economic or political instabilities, and natural disasters, that impact Australia and/or New Zealand, but that do not impact the broader Pacific region, could impact the Australia/New Zealand Fund to a larger degree than other funds that invest in securities of issuers in a broader geographical area.

Risks Associated with Investments in Other Investment Companies. The Australia/New Zealand Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and exchange-traded funds (“ETFs”). When the Australia/New Zealand Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Australia/New Zealand Fund will incur higher expenses, many of which may be duplicative. In addition, the Australia/New Zealand Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Australia/New Zealand Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Natural Resources and Commodity Investments. Should the Australia/New Zealand Fund invest in securities of companies involved in oil and gas, timber or mining activities, such investments will involve an increased number of risks, including geological risks, environmental liabilities, governmental regulations, and other risks involved in exploration, mining, distribution and marketing oil, gas, and other minerals, which can result in a higher degree of overall risk for the Australia/New Zealand Fund. These companies may be affected by changes in overall market movements, commodity prices, interest rates, or sectors affecting a particular commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political and regulatory developments.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

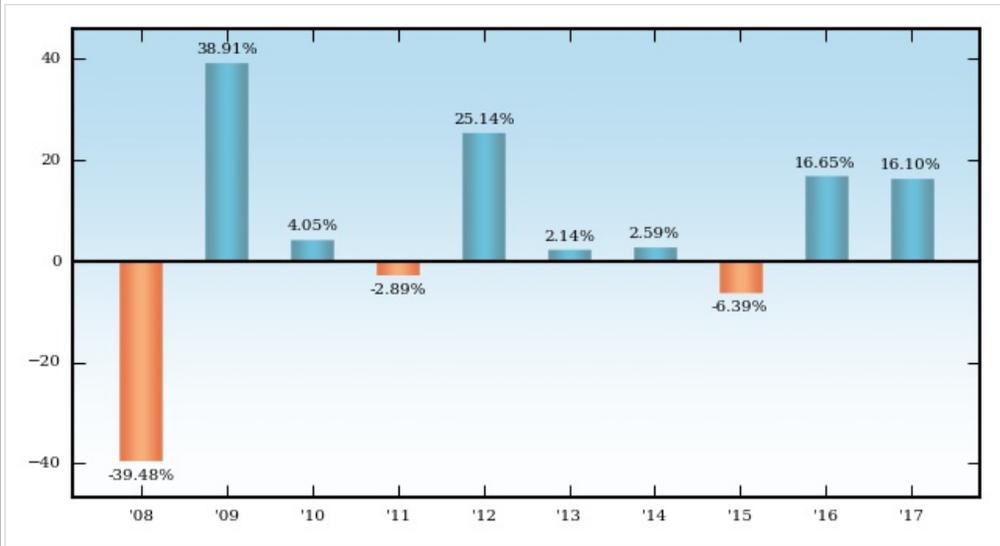

Stock Market Risk. The Australia/New Zealand Fund’s investments will fluctuate in price. This means that the Australia/New Zealand Fund’s share price will go up and down, and Australia/New Zealand Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

FUND’S PAST PERFORMANCE

The bar chart and performance table that follows illustrate the variability of the Australia/New Zealand Fund’s returns. The Australia/New Zealand Fund’s past performance (before and after taxes) does not necessarily indicate how the Australia/New Zealand Fund will perform in the future. The information provides some indication of the risks of investing in the Australia/New Zealand Fund by showing changes in its performance from year to year over the life of the Fund and by showing how its average annual returns for 1, 5, and 10 years compare with those of a broad measure of market performance. The performance of the comparative indices does not reflect deductions for fees, expenses or taxes. Updated performance information, current through the most recent month end, is available on the Australia/New Zealand Fund’s website at www.commonwealthfunds.com.

AUSTRALIA/NEW ZEALAND FUND

Year-by-year return as of 12/31 each year (%)

For the periods included in the bar chart:

BestQuarter 26.04%, 3rd Quarter, 2009
WorstQuarter (20.83)%, 4th Quarter, 2008

Average Annual Total Returns for Periods Ended December 31, 2017

Average Annual Total Returns - Commonwealth Australia/New Zealand Fund	1 Year	5 Years	10 Years
Commonwealth Australia/New Zealand Fund	16.10%	5.85%	3.51%
Commonwealth Australia/New Zealand Fund Return After Taxes on Distributions	16.51%	5.57%	2.74%
Commonwealth Australia/New Zealand Fund Return After Taxes on Distributions and Sale of Fund Shares	9.82%	4.99%	2.79%
NZX 50 Index (reflects no deduction for fees, expenses or taxes)	24.71%	12.14%	6.77%
Australian All Ordinaries Index (reflects no deduction for fees, expenses or taxes)	23.48%	5.79%	4.29%

After-tax returns are calculated using the historical highest federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on the investor's tax situation and may differ from those shown, and the after-tax returns shown are not relevant to investors who hold their Australia/New Zealand Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

Expense Example Narrative [Text Block]	rr_ExpenseExampleNarrativeTextBlock	The following example is intended to help you compare the cost of investing in the Australia/New Zealand Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Australia/New Zealand Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Australia/New Zealand Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:
Strategy [Heading]	rr_StrategyHeading	Principal Investment Strategies
Strategy Narrative [Text Block]		Under normal market conditions, the Australia/New Zealand Fund invests at least 80% of its net assets in the securities of, and depositary receipts (including American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), and European Depositary Receipts ("EDRs")) represented by, Australian and New Zealand issuers that are tied economically to Australia or New Zealand. The Australia/New Zealand Fund considers an issuer to be an Australian or New Zealand issuer and thus tied economically to Australia or New Zealand if: (1) the issuer is organized under Australia or New Zealand law; (2) the securities of the issuer are listed on Australia or New Zealand stock exchanges regardless of the country in which the issuer is organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold in Australia or New Zealand; or (4) the securities are issued or guaranteed by

rr_StrategyNarrativeTextBlock

government entities of Australia or New Zealand. The Australia/New Zealand Fund invests primarily in debt and equity securities of Australian/New Zealand issuers. The Australia/New Zealand Fund may also consider an issuer to be an Australian or New Zealand issuer if it issues securities denominated in the local currency of either Australia or New Zealand. The Australia/New Zealand Fund's equity investments may include common and preferred stock and securities convertible into common stock. The Australia/New Zealand Fund's investments may include issuers of any market capitalization. In addition, the Australia/New Zealand Fund may invest in ADRs, which are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Australia/New Zealand Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated.

The Australia/New Zealand Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds.

FCA Corp, the Australia/New Zealand Fund's investment adviser, does not attempt to maintain equal or set allocations to Australia or New Zealand. Rather, the Australia/New Zealand Fund, from time to time, invests different percentages of its assets in Australia and New Zealand, depending on available investment opportunities and economic and market conditions. The Australia/New Zealand Fund may invest in companies that focus on natural resources production, refining and development.

The Australia/New Zealand Fund's investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations ("NRSROs"). The determination as to whether to make a particular investment in debt securities is based on FCA Corp's analysis of the risk of the debt security versus the price and return of such debt security. The Australia/New Zealand Fund's debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., "junk bonds") based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Australia/New Zealand Fund may also enter into derivative transactions. The Australia/New Zealand Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Australia/New Zealand Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Australia/New Zealand Fund also may enter into foreign currency forward contracts. The Australia/New Zealand Fund may also engage in borrowing for cash management purposes. The Australia/New Zealand Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Australia/New Zealand Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company's growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Australia/New Zealand Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to other

		<p>issuers);</p> <ul style="list-style-type: none"> ■ Earnings growth potential and/or sustainability; ■ Price of security relative to historical and/or future cash flow; ■ Sustainable franchise value; ■ Price of a security relative to price of underlying stock, if a convertible security; ■ Yield on security relative to yield of other fixed-income securities; ■ Interest or dividend income; ■ Call and/or put features; ■ Price of a security relative to price of other comparable securities; ■ Size of issue; and ■ Impact of security on diversification of the portfolio. <p>FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Fund, or in the course of adjusting the Australia/New Zealand Fund's emphasis(es) on a given country(ies) or sector(s). The Australia/New Zealand Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.</p>
--	--	---

Risk [Heading]	rr_RiskHeading	<p>Principal Risks</p>
Risk Narrative [Text Block]		<p>An investment in the Australia/New Zealand Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):</p> <p>Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Australia/New Zealand Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Australia/New Zealand Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Australia/New Zealand Fund’s portfolio investments, and may affect the Australia/New Zealand Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.</p> <p>Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Australia/New Zealand Fund’s net asset value and, therefore, may increase the volatility of the Australia/New Zealand Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Australia/New Zealand Fund’s total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Australia/New Zealand Fund.</p> <p>Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Australia/New Zealand Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be</p>

exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Australia/New Zealand Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Australia/New Zealand Fund's investments in fixed income securities denominated in a foreign currency. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Australia/New Zealand Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Australia/New Zealand Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Australia/New Zealand Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Australia/New Zealand Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Foreign Securities Risk. Foreign securities risks to which the Australia/New Zealand Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Australia/New Zealand Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Australia/New Zealand Fund to liquidate positions. This in turn may cause delays in the Australia/New Zealand Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a

rr_RiskNarrativeTextBlock

security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Australia/New Zealand Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Australia/New Zealand Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Australia/New Zealand Fund. Additionally, the Australia/New Zealand Fund's direct operations could negatively impact the Australia/New Zealand Fund's performance. For instance, because the Australia/New Zealand Fund's asset base may be considered small relative to other mutual funds, the Australia/New Zealand Fund will operate with correspondingly higher total annual operating expenses. To the extent the Australia/New Zealand Fund's assets are not increased and the Australia/New Zealand Fund's expense ratios are not decreased, the Australia/New Zealand Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Australia/New Zealand. The Australia/New Zealand Fund, by focusing its investments on Australian and New Zealand issuers, may be exposed to additional risks that other funds that invest in securities of issuers in a broader region may not be exposed. For instance, financial, economic or political instabilities, and natural disasters, that impact Australia and/or New Zealand, but that do not impact the broader Pacific region, could impact the Australia/New Zealand Fund to a larger degree than other funds that invest in securities of issuers in a broader geographical area.

Risks Associated with Investments in Other Investment Companies. The Australia/New Zealand Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and exchange-traded funds ("ETFs"). When the Australia/New Zealand Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Australia/New Zealand Fund will incur higher expenses, many of which may be duplicative. In addition, the Australia/New Zealand Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Australia/New Zealand Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Natural Resources and Commodity Investments. Should the Australia/New Zealand Fund invest in securities of companies involved in oil and gas, timber or mining activities, such investments will involve an increased number of risks, including geological risks, environmental liabilities, governmental regulations, and other risks involved in exploration, mining, distribution and marketing oil, gas, and other minerals, which can result in a higher degree of overall risk for the Australia/New Zealand Fund. These companies may be affected by changes in overall market movements, commodity prices, interest rates, or sectors affecting a particular commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political and regulatory developments.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

Stock Market Risk. The Australia/New Zealand Fund's investments will fluctuate in price. This

		means that the Australia/New Zealand Fund's share price will go up and down, and Australia/New Zealand Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

Risk/Return Summary - AFRICA FUND

AFRICA FUND

Africa Fund (CAFRX)

Investment Objective

The investment objective of the Africa Fund (the "Africa Fund") is to provide long-term capital appreciation and current income.

Fees and Expenses of the Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Africa Fund.

Shareholder Fees (fees paid directly from your investment)

Shareholder Fees	AFRICA FUND AFRICA FUND
Redemption Fee (as a percentage of the amount redeemed or exchanged within 14 days and a \$15 fee for redemptions paid by wire)	2.00%

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Annual Fund Operating Expenses	AFRICA FUND AFRICA FUND
Management Fee	0.75%
Distribution (12b-1) Fees	0.25% ^[1]
Other Expenses	2.29%
Acquired Fund Fees and Expenses	0.15% ^[2]
Total Annual Fund Operating Expenses	3.44%
Fee Reduction and/or Expense Reimbursement	(1.54%) ^[3]
Total Annual Fund Operating Expenses After Fee Reductions and/or Expense Reimbursement	1.90%

- [1] The Africa Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.
- [2] The term "Acquired Fund Fees and Expenses" refers to other investment companies in which the Africa Fund invests and represents the pro rata expense indirectly incurred by the Fund as a result of investing in other investment companies, including exchange-traded funds ("ETFs"), closed-end funds and money market funds that have their own operating expenses. The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Africa Fund's financial highlights table.
- [3] FCA Corp has entered into a written expense limitation agreement under which it has agreed to limit the total expenses of the Africa Fund (exclusive of interest, distribution fees pursuant to Rule 12b-1 Plans, taxes, acquired fund fees and expenses, brokerage commissions, extraordinary expenses and dividend expense on short sales) to an annual rate of 1.50% of the average daily net assets of the Fund. This expense limitation agreement may be terminated by FCA Corp or the Trust at any time after February 28, 2019. FCA Corp may recoup from the Fund any reduced fees and/or expenses reimbursed pursuant to this agreement if such recoupment does not cause the Africa Fund to exceed the expense limitation in place at the time the fee was reduced and/or expenses were reimbursed and such recoupment is made within three years after the year in which FCA Corp incurred the expense.

Example:

The following example is intended to help you compare the cost of investing in the Africa Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Africa Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, the expense reduction/reimbursement remains in place for the contractual period only, and that the Africa Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:

Expense Example	1 Year	3 Years	5 Years	10 Years
AFRICA FUND AFRICA FUND USD (\$)	193	913	1,656	3,618

Portfolio Turnover

The Africa Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Africa Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Africa Fund's performance. During the most recent fiscal year, the Africa Fund's portfolio turnover rate was 12% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Africa Fund invests at least 80% of its net assets in the securities of, and depositary receipts (including American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), and European Depositary Receipts ("EDRs")) represented by, African issuers that are tied economically to Africa. The Africa Fund considers an issuer to be an African issuer and thus tied economically to Africa if: (1) the issuer is organized under the laws of a country in Africa; (2) the securities of the issuer are listed on a stock exchange(s) in a country in Africa, regardless of the country in which the issuer is organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold in countries in Africa; or (4) the securities are issued or guaranteed by government entities of African countries. The Africa Fund invests primarily in debt and equity securities of African issuers. The Africa Fund may also consider an issuer to be an African issuer if it issues securities denominated in a local currency of a country located on the continent of Africa. The Africa Fund's equity investments may include common and preferred stock and securities convertible into common stock. The Africa Fund's investments may include issuers of any market capitalization. In addition, the Africa Fund may invest in ADRs, which are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests may be U.S. dollar-denominated or denominated in a foreign currency.

The Africa Fund may emphasize investments in the Sub-Saharan countries of Africa, although the Africa Fund may invest in securities of issuers located in any country in Africa. The Africa Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds ("ETFs"). The Africa Fund may invest in emerging market countries in Africa as well as those emerging market countries that are considered "frontier countries" - meaning that they have less developed capital markets and economies than typically seen in traditional emerging markets. The Africa Fund may invest in companies that focus on natural resources production, refining and development.

The Africa Fund's investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations ("NRSROs"). The determination as to whether to make a particular investment in debt securities is based on FCA Corp's, the Africa Fund's investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Fund's debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., "junk bonds") based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Africa Fund may also enter into derivative transactions. The Africa Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Africa Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Africa Fund also may enter into foreign currency forward contracts. The Africa Fund may also engage in borrowing for cash management purposes. The Africa Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Africa Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company's growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Africa Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;
- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;
- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Africa Fund, or in the course of adjusting the Africa Fund's emphasis(es) on a given region(s) or sector(s). The Africa Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Principal Risks

An investment in the Africa Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):

Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Africa Fund shares (sometimes referred to as "market timing" or "frequent trading activities") may result in a dilution in the value of Africa Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Africa Fund's portfolio investments, and may affect the Africa Fund's cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.

Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Africa Fund's net asset value and, therefore, may increase the volatility of the Africa Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Africa Fund's total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Africa Fund.

Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Africa Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Africa Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Africa Fund's investments in fixed income securities denominated in a foreign currency. It may not be possible for the Fund to effectively hedge the currency risks of many developing countries. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Africa Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Africa Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Africa Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Emerging Markets Risk. To the extent that the Africa Fund invests in issuers located in emerging markets, the foreign securities risk may be heightened. Due to political changes, changes in taxation, or currency controls that could adversely affect investments located in emerging market countries, investments of this nature may be more volatile than investments made in the markets of more developed foreign countries with more mature economies. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. See also Risks Associated with Africa and Risks Associated with Natural Resources and Commodity Investments.

Foreign Securities Risk. Foreign securities risks to which the Africa Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Africa Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Africa Fund to liquidate positions. This in turn may cause delays in the Africa Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Africa Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Africa Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Africa Fund. Additionally, the Africa Fund's direct operations could negatively impact the Africa Fund's performance. For instance, because the Africa Fund's asset base may be considered small relative to other mutual funds, the Fund will operate with correspondingly higher total annual operating expenses. To the extent the Africa Fund's assets are not increased and the Africa Fund's expense ratios are not decreased, the Africa Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Africa. The Africa Fund, by focusing its investments on issuers located in African countries, may be exposed to additional risks that other funds that invest in securities of issuers in a broader region may not be exposed. For instance, financial, economic or political instabilities that impact countries in Africa, and in particular, the Sub-Saharan countries, could impact the Africa Fund to a larger degree than other funds that invest in securities of issuers in a broader geographical area. Changes in economies, tax policies, high inflation rates, governmental instability, war or other political or economic factors may have an adverse effect on the Africa Fund's investments. The Africa Fund is highly dependent on the state of the economies of countries throughout Africa and, in particular Sub-Saharan countries. Some markets of the countries in Africa in which the Africa Fund will invest are in only the earliest stages of development with less liquidity, fewer securities brokers, fewer issuers and more capital market restrictions

than developed markets. Certain governments in countries in Africa restrict or control to varying degrees the ability of foreign investors to invest in those countries. These restrictions may prevent or limit investments in securities of issuers located or operating in African countries. Less information may be available about companies in which the Africa Fund invests because many companies that are tied economically to Africa are not subject to uniform accounting, auditing, and financial reporting standards or to other regulatory practices required of U.S. companies. Investment in securities of African issuers involves risks not typically associated with investments in securities of issuers in developed countries. Emerging market countries within Africa may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. A sub-set of African emerging market countries are considered to be "frontier markets." Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries. Any particular country in Africa may be subject to the foregoing risks in greater or lesser degrees relative to other countries in Africa, and as a result, circumstances that may positively affect a country in Africa in which the Africa Fund is not invested may not have a corresponding positive effect on other countries in Africa in which the Africa Fund is invested.

Risks Associated with Investments in Other Investment Companies. The Africa Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Africa Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Africa Fund will incur higher expenses, many of which may be duplicative. In addition, the Africa Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Africa Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Natural Resources and Commodity Investments. Should the Africa Fund invest in securities of companies involved in oil and gas, timber or mining activities, such investments will involve an increased number of risks, including geological risks, environmental liabilities, governmental regulations, and other risks involved in exploration, mining, distribution and marketing oil, gas, and other minerals, which can result in a higher degree of overall risk for the Africa Fund. These companies may be affected by changes in overall market movements, commodity prices, interest rates, or sectors affecting a particular commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political and regulatory developments.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

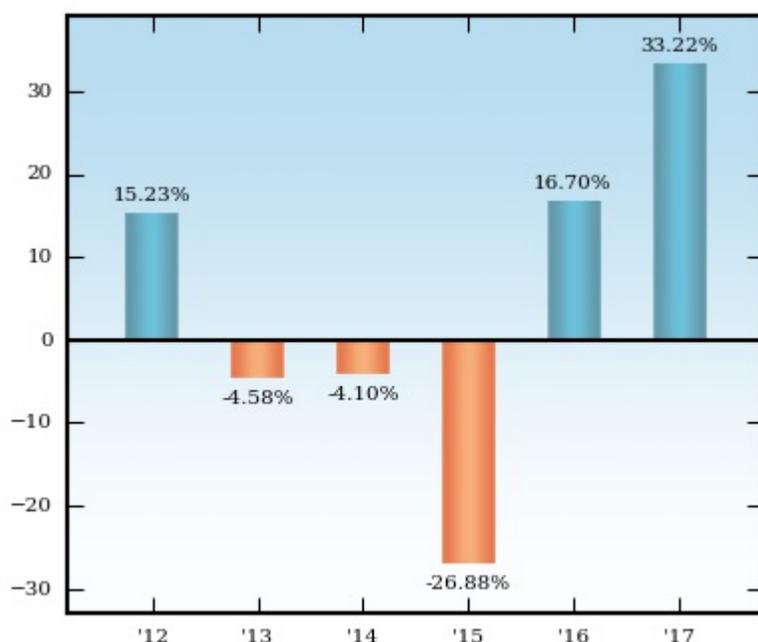

Stock Market Risk. The Africa Fund's investments will fluctuate in price. This means that the Africa Fund's share price will go up and down, and Africa Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

FUND'S PAST PERFORMANCE

The bar chart and performance table that follows illustrate the variability of the Africa Fund's returns. The Africa Fund's past performance (before and after taxes) does not necessarily indicate how the Africa Fund will perform in the future. The information provides some indication of the risks of investing in the Africa Fund by showing changes in its performance from year to year over the life of the Fund and by showing how its average annual returns for the 1-year, 5-years and since inception periods compare with those of a broad measure of market performance. The performance of the comparative indices does not reflect deductions for fees, expenses or taxes. Updated performance information, current through the most recent month end, is available on the Africa Fund's website at www.commonwealthfunds.com.

AFRICA FUND

Year-by-year return as of 12/31 each year (%)

For the periods included in the bar chart:

BestQuarter 20.67%, 4th Quarter, 2017

WorstQuarter (14.35)%, 3rd Quarter, 2015

Average Annual Total Returns for Periods Ended December 31, 2017

Average Annual Total Returns - AFRICA FUND	1 Year	5 Years	Since Inception	Inception Date
AFRICA FUND	33.22%	0.79%	1.98%	Nov. 07, 2011
AFRICA FUND Return After Taxes on Distributions	33.45%	0.73%	1.89%	Nov. 07, 2011
AFRICA FUND Return After Taxes on Distributions and Sale of Fund Shares	19.24%	0.68%	1.61%	Nov. 07, 2011
MSCI Emerging Markets Index (reflects no deduction for fees, expenses or taxes)	37.28%	4.35%	5.08%	Nov. 07, 2011
Dow Jones Africa Titans 50 Index (reflects no deduction for fees, expenses or taxes)	23.50%	(1.65%)	0.71%	Nov. 07, 2011

After-tax returns are calculated using the historical highest federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on the investor's tax situation and may differ from those shown, and the after-tax returns shown are not relevant to investors who hold their Africa Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

Risk/Return [Heading]	rr_RiskReturnHeading	Africa Fund (CAFRX)
Objective [Heading]	rr_ObjectiveHeading	Investment Objective
Objective, Primary [Text Block]	rr_ObjectivePrimaryTextBlock	The investment objective of the Africa Fund (the "Africa Fund") is to provide long-term capital appreciation and current income.
Expense [Heading]	rr_ExpenseHeading	Fees and Expenses of the Fund
Expense Narrative [Text Block]	rr_ExpenseNarrativeTextBlock	This table describes the fees and expenses you may pay if you buy and hold shares of the Africa Fund.
Shareholder Fees Caption [Text]	rr_ShareholderFeesCaption	Shareholder Fees (fees paid directly from your investment)
Operating Expenses Caption [Text]	rr_OperatingExpensesCaption	Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)
Fee Waiver or Reimbursement over Assets, Date of Termination	rr_FeeWaiverOrReimbursementOverAssetsDateOfTermination	February 28, 2019
Portfolio Turnover [Heading]	rr_PortfolioTurnoverHeading	Portfolio Turnover
Portfolio Turnover [Text Block]	rr_PortfolioTurnoverTextBlock	The Africa Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Africa Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Africa Fund's performance. During the most recent fiscal year, the Africa Fund's portfolio turnover rate was 12% of the average value of its portfolio.
Portfolio Turnover, Rate	rr_PortfolioTurnoverRate	12.00%
Expenses Not Correlated to Ratio Due to Acquired Fund Fees [Text]	rr_ExpensesNotCorrelatedToRatioDueToAcquiredFundFees	The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Africa Fund's financial highlights table.
Expense Example [Heading]	rr_ExpenseExampleHeading	Example:
Expense Example Narrative [Text Block]	rr_ExpenseExampleNarrativeTextBlock	The following example is intended to help you compare the cost of investing in the Africa Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Africa Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, the expense reduction/reimbursement remains in place for the contractual period only, and that the Africa Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:
Strategy [Heading]	rr_StrategyHeading	Principal Investment Strategies
Strategy Narrative [Text Block]		Under normal market conditions, the Africa Fund invests at least 80% of its net assets in the securities of, and depository receipts (including American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), and European Depositary Receipts ("EDRs")) represented by, African issuers that are tied economically to Africa. The Africa Fund considers an issuer to be an African issuer and thus tied economically to Africa if: (1) the issuer is organized under the laws of a country in Africa; (2) the securities of the issuer are listed on a stock exchange(s) in a country in Africa, regardless of the country in which the issuer is

rr_StrategyNarrativeTextBlock

organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold in countries in Africa; or (4) the securities are issued or guaranteed by government entities of African countries. The Africa Fund invests primarily in debt and equity securities of African issuers. The Africa Fund may also consider an issuer to be an African issuer if it issues securities denominated in a local currency of a country located on the continent of Africa. The Africa Fund's equity investments may include common and preferred stock and securities convertible into common stock. The Africa Fund's investments may include issuers of any market capitalization. In addition, the Africa Fund may invest in ADRs, which are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests may be U.S. dollar-denominated or denominated in a foreign currency.

The Africa Fund may emphasize investments in the Sub-Saharan countries of Africa, although the Africa Fund may invest in securities of issuers located in any country in Africa. The Africa Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds ("ETFs"). The Africa Fund may invest in emerging market countries in Africa as well as those emerging market countries that are considered "frontier countries" - meaning that they have less developed capital markets and economies than typically seen in traditional emerging markets. The Africa Fund may invest in companies that focus on natural resources production, refining and development.

The Africa Fund's investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations ("NRSROs"). The determination as to whether to make a particular investment in debt securities is based on FCA Corp's, the Africa Fund's investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Fund's debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., "junk bonds") based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Africa Fund may also enter into derivative transactions. The Africa Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Africa Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Africa Fund also may enter into foreign currency forward contracts. The Africa Fund may also engage in borrowing for cash management purposes. The Africa Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Africa Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company's growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Africa Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to

		<p>other issuers);</p> <ul style="list-style-type: none"> ■ Earnings growth potential and/or sustainability; ■ Price of security relative to historical and/or future cash flow; ■ Sustainable franchise value; ■ Price of a security relative to price of underlying stock, if a convertible security; ■ Yield on security relative to yield of other fixed-income securities; ■ Interest or dividend income; ■ Call and/or put features; ■ Price of a security relative to price of other comparable securities; ■ Size of issue; and ■ Impact of security on diversification of the portfolio. <p>FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Africa Fund, or in the course of adjusting the Africa Fund's emphasis(es) on a given region(s) or sector(s). The Africa Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.</p>
--	--	---

Risk [Heading]	rr_RiskHeading	<p>Principal Risks</p>
Risk Narrative [Text Block]		<p>An investment in the Africa Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):</p> <p>Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Africa Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Africa Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Africa Fund’s portfolio investments, and may affect the Africa Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.</p> <p>Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Africa Fund’s net asset value and, therefore, may increase the volatility of the Africa Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Africa Fund’s total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Africa Fund.</p> <p>Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Africa Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among</p>

others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Africa Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Africa Fund's investments in fixed income securities denominated in a foreign currency. It may not be possible for the Fund to effectively hedge the currency risks of many developing countries. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Africa Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Africa Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Africa Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Emerging Markets Risk. To the extent that the Africa Fund invests in issuers located in emerging markets, the foreign securities risk may be heightened. Due to political changes, changes in taxation, or currency controls that could adversely affect investments located in emerging market countries, investments of this nature may be more volatile than investments made in the markets of more developed foreign countries with more mature economies. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. See also Risks Associated with Africa and Risks Associated with Natural Resources and Commodity Investments.

Foreign Securities Risk. Foreign securities risks to which the Africa Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Africa Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Africa Fund to liquidate positions. This in turn may cause delays in the Africa Fund's receipt of proceeds and an associated loss of potential dividend and interest

rr_RiskNarrativeTextBlock

income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Africa Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Africa Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Africa Fund. Additionally, the Africa Fund's direct operations could negatively impact the Africa Fund's performance. For instance, because the Africa Fund's asset base may be considered small relative to other mutual funds, the Fund will operate with correspondingly higher total annual operating expenses. To the extent the Africa Fund's assets are not increased and the Africa Fund's expense ratios are not decreased, the Africa Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Africa. The Africa Fund, by focusing its investments on issuers located in African countries, may be exposed to additional risks that other funds that invest in securities of issuers in a broader region may not be exposed. For instance, financial, economic or political instabilities that impact countries in Africa, and in particular, the Sub-Saharan countries, could impact the Africa Fund to a larger degree than other funds that invest in securities of issuers in a broader geographical area. Changes in economies, tax policies, high inflation rates, governmental instability, war or other political or economic factors may have an adverse effect on the Africa Fund's investments. The Africa Fund is highly dependent on the state of the economies of countries throughout Africa and, in particular Sub-Saharan countries. Some markets of the countries in Africa in which the Africa Fund will invest are in only the earliest stages of development with less liquidity, fewer securities brokers, fewer issuers and more capital market restrictions than developed markets. Certain governments in countries in Africa restrict or control to varying degrees the ability of foreign investors to invest in those countries. These restrictions may prevent or limit investments in securities of issuers located or operating in African countries. Less information may be available about companies in which the Africa Fund invests because many companies that are tied economically to Africa are not subject to uniform accounting, auditing, and financial reporting standards or to other regulatory practices required of U.S. companies. Investment in securities of African issuers involves risks not typically associated with investments in securities of issuers in developed countries. Emerging market countries within Africa may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. A sub-set of African emerging market countries are considered to be "frontier markets." Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries. Any particular country in Africa may be subject to the foregoing risks in greater or

		<p>lesser degrees relative to other countries in Africa, and as a result, circumstances that may positively affect a country in Africa in which the Africa Fund is not invested may not have a corresponding positive effect on other countries in Africa in which the Africa Fund is invested.</p> <p>Risks Associated with Investments in Other Investment Companies. The Africa Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Africa Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Africa Fund will incur higher expenses, many of which may be duplicative. In addition, the Africa Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Africa Fund has no control over the investments and related risks taken by the underlying funds in which it invests.</p> <p>Risks Associated with Natural Resources and Commodity Investments. Should the Africa Fund invest in securities of companies involved in oil and gas, timber or mining activities, such investments will involve an increased number of risks, including geological risks, environmental liabilities, governmental regulations, and other risks involved in exploration, mining, distribution and marketing oil, gas, and other minerals, which can result in a higher degree of overall risk for the Africa Fund. These companies may be affected by changes in overall market movements, commodity prices, interest rates, or sectors affecting a particular commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political and regulatory developments.</p> <p>Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.</p> <p>Stock Market Risk. The Africa Fund's investments will fluctuate in price. This means that the Africa Fund's share price will go up and down, and Africa Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.</p>

<p>[1] The Africa Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.</p> <p>[2] The term "Acquired Fund Fees and Expenses" refers to other investment companies in which the Africa Fund invests and represents the pro rata expense indirectly incurred by the Fund as a result of investing in other investment companies, including exchange-traded funds ("ETFs"), closed-end funds and money market funds that have their own operating expenses. The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Africa Fund's financial highlights table.</p> <p>[3] FCA Corp has entered into a written expense limitation agreement under which it has agreed to limit the total expenses of the Africa Fund (exclusive of interest, distribution fees pursuant to Rule 12b-1 Plans, taxes, acquired fund fees and expenses, brokerage commissions, extraordinary expenses and dividend expense on short sales) to an annual rate of 1.50% of the average daily net assets of the Fund. This expense limitation agreement may be terminated by FCA Corp or the Trust at any time after February 28, 2019. FCA Corp may recoup from the Fund any reduced fees and/or expenses reimbursed pursuant to this agreement if such recoupment does not cause the Africa Fund to exceed the expense limitation in place at the time the fee was reduced and/or expenses were reimbursed and such recoupment is made within three years after the year in which FCA Corp incurred the expense.</p>			

Risk/Return Summary - Commonwealth Japan Fund

Commonwealth Japan Fund

Commonwealth Japan Fund (CNJFX)

Investment Objective

The investment objective of the Commonwealth Japan Fund (the "Japan Fund") is to provide long-term capital appreciation and current income.

Fees and Expenses of the Japan Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Japan Fund.

Shareholder Fees (fees paid directly from your investment)

Shareholder Fees	Commonwealth Japan Fund Commonwealth Japan Fund
Redemption Fee (as a percentage of the amount redeemed or exchanged within 14 days and a \$15 fee for redemptions paid by wire)	2.00%

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Annual Fund Operating Expenses	Commonwealth Japan Fund Commonwealth Japan Fund
Management Fee	0.75%
Distribution (12b-1) Fees	0.25% [1]
Other Expenses	1.88%
Total Annual Fund Operating Expenses	2.88%
Fee Reduction and/or Expense Reimbursement	(1.13%) [2]
Total Annual Fund Operating Expenses After Fee Reductions and/or Expense Reimbursement	1.75%

[1] The Japan Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Japan Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.

[2] FCA Corp has entered into a written expense limitation agreement under which it has agreed to limit the total expenses of the Japan Fund (exclusive of interest, distribution fees pursuant to Rule 12b-1 Plans, taxes, acquired fund fees and expenses, brokerage commissions, extraordinary expenses and dividend expense on short sales) to an annual rate of 1.50% of the average daily net assets of the Fund. This expense limitation agreement may be terminated by FCA Corp or the Trust at any time after February 28, 2019. FCA Corp may recoup from the Japan Fund any reduced fees and/or expenses reimbursed pursuant to this agreement if such recoupment does not cause the Japan Fund to exceed the expense limitation in place at the time the fee was reduced and/or the expenses were reimbursed and such recoupment is made within three years after the year in which FCA Corp incurred the expense.

Example:

The following example is intended to help you compare the cost of investing in the Japan Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Japan Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, the expense reduction/reimbursement remains in place for the contractual period only, and that the Japan Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:

Expense Example	1 Year	3 Years	5 Years	10 Years
Commonwealth Japan Fund Commonwealth Japan Fund USD (\$)	178	785	1,419	3,124

Portfolio Turnover

The Japan Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Japan Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Japan Fund's performance. During the most recent fiscal year, the Japan Fund's portfolio turnover rate was 14% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Japan Fund invests at least 80% of its net assets in the securities of, and depositary receipts (including American Depositary Receipts (“ADRs”), Global Depositary Receipts (“GDRs”), and European Depositary Receipts (“EDRs”)) represented by, Japanese issuers that are tied economically to Japan. The Japan Fund considers an issuer to be a Japanese issuer and thus tied economically to Japan if: (1) the issuer is organized under Japan’s law; (2) the securities of the issuer are listed on Japan’s stock exchanges regardless of the country in which the issuer is organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold in Japan; or (4) the securities are issued by government entities of Japan. The Japan Fund invests primarily in debt and equity securities of Japanese issuers. The Japan Fund may also consider an issuer to be a Japanese issuer if it issues securities denominated in the Japanese Yen. The Japan Fund’s equity investments may include common and preferred stock and securities convertible into common stock. The Japan Fund’s investments may include issuers of any market capitalization. In addition, the Japan Fund may purchase ADRs, which are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Japan Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated. The Japan Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds (“ETFs”).

The Japan Fund’s investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations (“NRSROs”). The determination as to whether to make a particular investment in debt securities is based on FCA Corp’s, the Japan Fund’s investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Japan Fund’s debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., “junk bonds”) based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Japan Fund may also enter into derivative transactions. The Japan Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Japan Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Japan Fund also may enter into foreign currency forward contracts. The Japan Fund may also engage in borrowing for cash management purposes. The Japan Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Japan Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company’s growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Japan Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;
- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;
- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Japan Fund, or in the course of adjusting the Japan Fund's emphasis(es) on a given sector(s). The Japan Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Principal Risks

An investment in the Japan Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):

Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Japan Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Japan Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Japan Fund’s portfolio investments, and may affect the Japan Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.

Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Japan Fund’s net asset value and, therefore, may increase the volatility of the Japan Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Japan Fund’s total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Japan Fund.

Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Japan Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Japan Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Japan Fund's investments in fixed income securities denominated in a foreign currency. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Japan Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Japan Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Japan Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Japan Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Foreign Securities Risk. Foreign securities risks to which the Japan Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Japan Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Japan Fund to liquidate positions. This in turn may cause delays in the Japan Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Japan Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Japan Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Japan Fund. Additionally, the Japan Fund's direct operations could negatively impact the Fund's performance. For instance, because the Japan Fund's asset base may be considered small relative to other mutual funds, the Japan Fund will operate with correspondingly higher total annual operating expenses. To the extent the Japan Fund's assets are not increased and the Fund's expense ratios are not decreased, the Japan Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Investments in Other Investment Companies. The Japan Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Japan Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Japan Fund will incur higher expenses, many of which may be duplicative. In addition, the Japan Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Japan Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Japan. The Japan Fund, by focusing its investments on Japanese issuers, may be exposed to additional risks that other funds that invest in securities of issuers in more than one country or region may not be exposed. For instance, financial, economic or political instabilities that impact Japan, but that do not impact the broader Asian-Pacific region, could impact the Japan Fund to a larger degree than other funds that invest in securities of issuers in a broader geographical area. The Japanese economy has in the past been negatively affected at times by government intervention and protectionism, an unstable financial services sector, a heavy reliance on international trade, and natural disasters.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

Stock Market Risk. The Japan Fund's investments will fluctuate in price. This means that the Japan Fund's share price will go up and down, and Japan

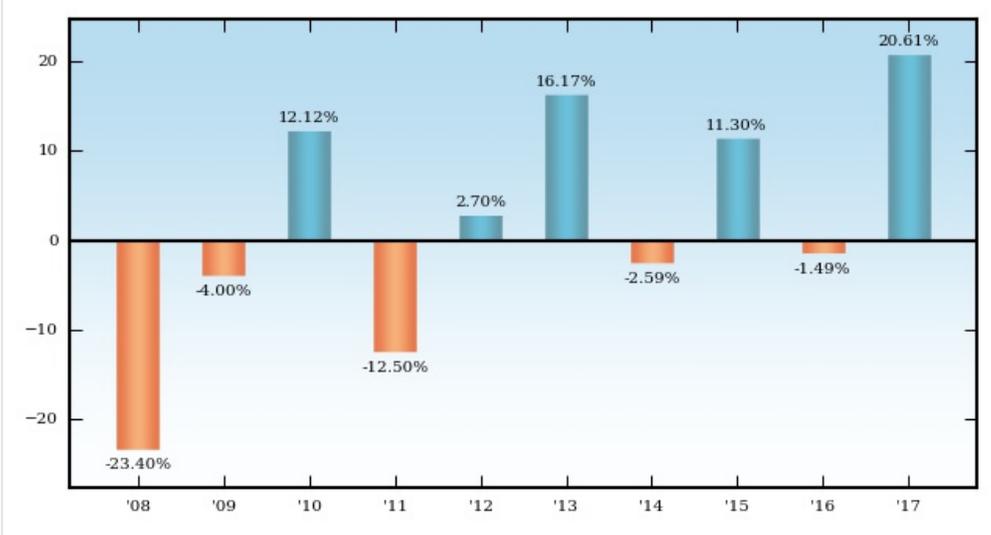

Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

FUND'S PAST PERFORMANCE

The bar chart and performance table that follows illustrate the variability of the Japan Fund's returns. The Fund's past performance (before and after taxes) does not necessarily indicate how the Fund will perform in the future. The information provides some indication of the risks of investing in the Fund by showing changes in its performance from year to year over the life of the Fund and by showing how its average annual returns for 1, 5, and 10 years compare with those of a broad measure of market performance. The performance of the comparative index does not reflect deductions for fees, expenses or taxes. Updated performance information, current through the most recent month end, is available on the Japan Fund's website at www.commonwealthfunds.com.

JAPAN FUND

Year-by-year return as of 12/31 each year (%)

For the periods included in the bar chart:

BestQuarter 15.77%, 2nd Quarter, 2009
WorstQuarter (19.27)%, 1st Quarter, 2009

Average Annual Total Returns for Periods Ended December 31, 2017

Average Annual Total Returns - Commonwealth Japan Fund	1 Year	5 Years	10 Years
Commonwealth Japan Fund	20.61%	8.39%	1.04%
Commonwealth Japan Fund Return After Taxes on Distributions	20.61%	8.39%	1.04%
Commonwealth Japan Fund Return After Taxes on Distributions and Sale of Fund Shares	11.66%	6.62%	0.80%
Tokyo Stock Price Index (reflects no deduction for fees, expenses or taxes)	26.69%	12.34%	4.28%

After-tax returns are calculated using the historical highest federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on the investor's tax situation and may differ from those shown, and the after-tax returns shown are not relevant to investors who hold their Japan Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

depending on their structure, the associated risks of each. The Japan Fund may invest in securities rated investment-grade or below investment-grade (“junk bonds”), and it may invest in debt securities that are of comparable quality that are not rated. The Japan Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Japan Fund uses derivatives to “hedge” the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Japan Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Foreign Securities Risk. Foreign securities risks to which the Japan Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Japan Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Japan Fund to liquidate positions. This in turn may cause delays in the Japan Fund’s receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange.

Management Risk. FCA Corp’s judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp’s reliance on investment strategy judgments about the “growth” potential of particular companies or the relative “value” of particular securities may prove to be incorrect or inconsistent with the overall market’s assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Japan Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Japan Fund’s strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Japan Fund. Additionally, the Japan Fund’s direct operations could negatively impact the Fund’s performance. For instance, because the Japan Fund’s asset base may be considered small relative to other mutual funds, the Japan Fund

will operate with correspondingly higher total annual operating expenses. To the extent the Japan Fund's assets are not increased and the Fund's expense ratios are not decreased, the Japan Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Investments in Other Investment Companies. The Japan Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Japan Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Japan Fund will incur higher expenses, many of which may be duplicative. In addition, the Japan Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Japan Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Japan. The Japan Fund, by focusing its investments on Japanese issuers, may be exposed to additional risks that other funds that invest in securities of issuers in more than one country or region may not be exposed. For instance, financial, economic or political instabilities that impact Japan, but that do not impact the broader Asian-Pacific region, could impact the Japan Fund to a larger degree than other funds that invest in securities of issuers in a broader geographical area. The Japanese economy has in the past been negatively affected at times by government intervention and protectionism, an unstable financial services sector, a heavy reliance on international trade, and natural disasters.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

Stock Market Risk. The Japan Fund's investments will fluctuate in price. This means that the Japan Fund's share price will go up and down, and Japan Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

- [1] The Japan Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Japan Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.
- [2] FCA Corp has entered into a written expense limitation agreement under which it has agreed to limit the total expenses of the Japan Fund (exclusive of interest, distribution fees pursuant to Rule 12b-1 Plans, taxes, acquired fund fees and expenses, brokerage commissions, extraordinary expenses and dividend expense on short sales) to an annual rate of 1.50% of the average daily net assets of the Fund. This expense limitation agreement may be terminated by FCA Corp or the Trust at any time after February 28, 2019. FCA Corp may recoup from the Japan Fund any reduced fees and/or expenses reimbursed pursuant to this agreement if such recoupment does not cause the Japan Fund to exceed the expense limitation in place at the time the fee was reduced and/or the expenses were reimbursed and such recoupment is made within three years after the year in which FCA Corp incurred the expense.

Risk/Return Summary - Commonwealth Global Fund

Commonwealth Global Fund

Commonwealth Global Fund (CGLX)

Investment Objective

The investment objective of the Commonwealth Global Fund (the "Global Fund") is to provide long-term capital appreciation and current income.

Fees and Expenses of the Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Global Fund.

Shareholder Fees (fees paid directly from your investment)

Shareholder Fees	Commonwealth Global Fund Commonwealth Global Fund
Redemption Fee (as a percentage of the amount redeemed or exchanged within 14 days and a \$15 fee for redemptions paid by wire)	2.00%

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Annual Fund Operating Expenses	Commonwealth Global Fund Commonwealth Global Fund
Management Fee	0.75%
Distribution (12b-1) Fees	0.25% [1]
Other Expenses	1.53%
Acquired Fund Fees and Expenses	0.03% [2]
Total Annual Fund Operating Expenses	2.56%

[1] The Global Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Global Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.

[2] The term "Acquired Fund Fees and Expenses" refers to other investment companies in which the Global Fund invests and represents the pro rata expense indirectly incurred by the Global Fund as a result of investing in other investment companies, including exchange-traded funds ("ETFs"), closed-end funds and money market funds that have their own expenses. The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Global Fund's financial highlights table.

Example:

The following example is intended to help you compare the cost of investing in the Global Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Global Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Global Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:

Expense Example	1 Year	3 Years	5 Years	10 Years
Commonwealth Global Fund Commonwealth Global Fund USD (\$)	259	796	1,360	2,895

Portfolio Turnover

The Global Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Global Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Global Fund's performance. During the most recent fiscal year, the Global Fund's portfolio turnover rate was 11% of the average value of its portfolio.

Principal Investment Strategies

The Global Fund invests primarily in U.S. and foreign equity securities (including common and preferred stock and securities convertible into common stock) and in debt securities. The Global Fund's investments may include issuers of any market capitalization. Although the Global Fund can invest in companies from any country, it generally focuses on established companies in countries with developed economies. The Global Fund may invest in securities denominated in any currency. In addition to buying equity and debt securities, the Global Fund may invest in depositary receipts (including American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), and European Depositary Receipts ("EDRs")). ADRs are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated.

Under normal market conditions, the Global Fund invests at least 40% of its net assets in the securities of, and depositary receipts represented by, foreign issuers. The Global Fund considers an issuer to be a foreign issuer if: (1) the issuer is organized under the laws of a jurisdiction other than those of the United States; (2) the securities of the issuer are listed on stock exchange outside the United States regardless of the country in which the issuer is organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold outside of the United States; or (4) the securities are issued or guaranteed by government entities other than the United States. The Global Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds ("ETFs"). The Global Fund may invest in emerging market countries. The Global Fund may invest in companies that focus on natural resources production, refining and development.

The Global Fund's investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations ("NRSROs"). The determination as to whether to make a particular investment in debt securities is based on FCA Corp's, the Global Fund's investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Fund's debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., "junk bonds") based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Global Fund may also enter into derivative transactions. The Global Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Global Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Global Fund also may enter into foreign currency forward contracts. The Global Fund may also engage in borrowing for cash management purposes. The Global Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Japan Fund may borrow up to one-third of its total assets.

FCA Corp will attempt whenever possible to: (i) diversify among companies, industries, and without restriction to any particular region such as Asia or Europe or any particular country such as the United States or Japan; (ii) focus on companies with reasonable valuations; and (iii) generally focus on countries with developed economies. FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp evaluates its beliefs and adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company's growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Global Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;
- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;
- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Global Fund, or in the course of adjusting the Global Fund's emphasis(es) on a given country(ies) or sector(s). The Global Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Principal Risks

An investment in the Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):

Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Global Fund shares (sometimes referred to as "market timing" or "frequent trading activities") may result in a dilution in the value of Global Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Global Fund's portfolio investments, and may affect the Global Fund's cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.

Borrowing Risk. Borrowing for investment purposes creates leverage, which will exaggerate the effect of any increase or decrease in the Global Fund's net asset value and, therefore, may increase the volatility of the Global Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Global Fund's total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Global Fund.

Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Global Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Global Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Global Fund's investments in fixed income securities denominated in a foreign currency. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Global Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Global Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Global Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Emerging Markets Risk. To the extent that the Global Fund invests in issuers located in emerging markets, the foreign securities risk may be heightened. Due to political changes, changes in taxation, or currency controls that could adversely affect investments located in emerging market countries, investments of this nature may be more volatile than investments made in the markets of more developed foreign countries with more mature economies. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. See also Risks Associated with Natural Resources and Commodity Investments.

Foreign Securities Risk. Foreign securities risks to which the Global Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Global Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Global Fund to liquidate positions. This in turn may cause delays in the Global Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange. To the extent that the Global Fund invests in issuers (or depositary receipts of issuers) located in emerging markets, the foreign securities risk may be heightened.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Global Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Global Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Global Fund. Additionally, the Global Fund's direct operations could negatively impact the Global Fund's performance. For instance, because the Global Fund's asset base may be considered small relative to other mutual funds, the Global Fund will operate with correspondingly higher total annual operating expenses. To the extent the Global Fund's assets are not increased and the Global Fund's expense ratios are not decreased, the Global Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Investments in Other Investment Companies. The Global Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Global Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Global Fund will incur higher expenses, many of which may be duplicative. In addition, the Global Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Global Fund has no control

over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Natural Resources and Commodity Investments. Should the Global Fund invest in securities of companies involved in oil and gas, timber or mining activities, such investments will involve an increased number of risks, including geological risks, environmental liabilities, governmental regulations, and other risks involved in exploration, mining, distribution and marketing oil, gas, and other minerals, which can result in a higher degree of overall risk for the Global Fund. These companies may be affected by changes in overall market movements, commodity prices, interest rates, or sectors affecting a particular commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political and regulatory developments.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

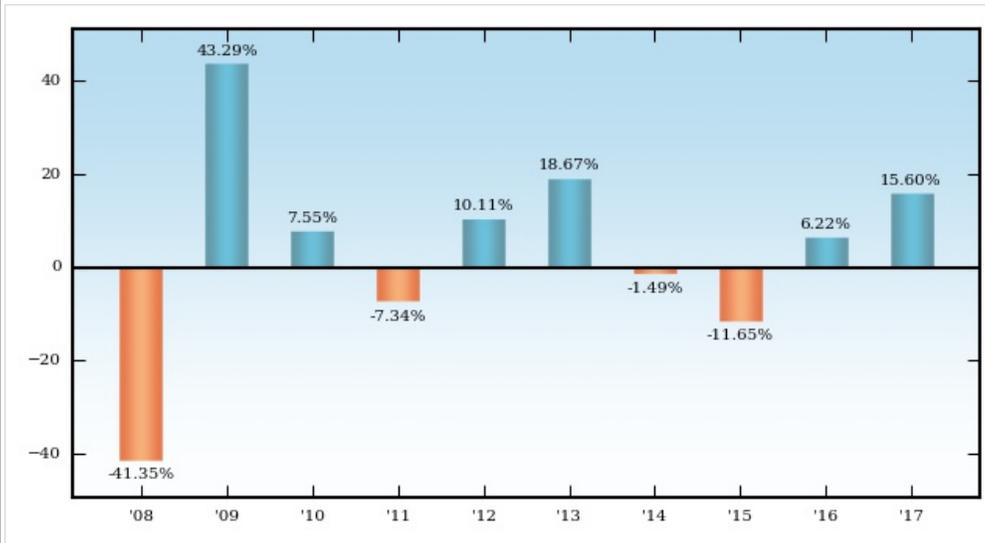

Stock Market Risk. The Global Fund's investments will fluctuate in price. This means that the Global Fund's share price will go up and down, and Global Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

FUND'S PAST PERFORMANCE

The bar chart and performance table that follows illustrate the variability of the Global Fund's returns. The Fund's past performance (before and after taxes) does not necessarily indicate how the Global Fund will perform in the future. The information provides some indication of the risks of investing in the Global Fund by showing changes in its performance from year to year over the life of the Fund and by showing how its average annual returns for 1-year, 5-year, and 10-year periods compare with those of a broad measure of market performance. The performance of the comparative index does not reflect deductions for fees, expenses or taxes. Updated performance information, current through the most recent month end, is available on the Global Fund's website at www.commonwealthfunds.com.

GLOBAL FUND

Year-by-year return as of 12/31 each year (%)

For the periods included in the bar chart:

BestQuarter 21.24%, 2nd Quarter, 2009

WorstQuarter (26.79)%, 4th Quarter, 2008

Average Annual Total Returns for Periods Ended December 31, 2017

Average Annual Total Returns - Commonwealth Global Fund	1 Year	5 Years	10 Years
Commonwealth Global Fund	15.60%	4.87%	1.58%
Commonwealth Global Fund Return After Taxes on Distributions	15.60%	4.06%	1.03%
Commonwealth Global Fund Return After Taxes on Distributions and Sale of Fund Shares	8.83%	3.72%	1.22%

The example assumes that you invest \$10,000 in the Global Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Global Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:
Strategy [Heading]	rr_StrategyHeading	Principal Investment Strategies
Strategy Narrative [Text Block]		The Global Fund invests primarily in U.S. and foreign equity securities (including common and preferred stock and securities convertible into common stock) and in debt securities. The Global Fund's investments may include issuers of any market capitalization. Although the Global Fund can invest in companies from any country, it generally focuses on established companies in countries with developed economies. The Global Fund may invest in securities denominated in any currency. In addition to buying equity and debt securities, the Global Fund may invest in depositary receipts (including American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), and European Depositary Receipts ("EDRs")). ADRs are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Fund may also

rr_StrategyNarrativeTextBlock

invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated.

Under normal market conditions, the Global Fund invests at least 40% of its net assets in the securities of, and depositary receipts represented by, foreign issuers. The Global Fund considers an issuer to be a foreign issuer if: (1) the issuer is organized under the laws of a jurisdiction other than those of the United States; (2) the securities of the issuer are listed on stock exchange outside the United States regardless of the country in which the issuer is organized; (3) the issuer derives 50% or more of its total revenue from goods and/or services produced or sold outside of the United States; or (4) the securities are issued or guaranteed by government entities other than the United States. The Global Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds ("ETFs"). The Global Fund may invest in emerging market countries. The Global Fund may invest in companies that focus on natural resources production, refining and development.

The Global Fund's investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations ("NRSROs"). The determination as to whether to make a particular investment in debt securities is based on FCA Corp's, the Global Fund's investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Fund's debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., "junk bonds") based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Global Fund may also enter into derivative transactions. The Global Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Global Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Global Fund also may enter into foreign currency forward contracts. The Global Fund may also engage in borrowing for cash management purposes. The Global Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Japan Fund may borrow up to one-third of its total assets.

FCA Corp will attempt whenever possible to: (i) diversify among companies, industries, and without restriction to any particular region such as Asia or Europe or any particular country such as the United States or Japan; (ii) focus on companies with reasonable valuations; and (iii) generally focus on countries with developed economies. FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp evaluates its beliefs and adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company's growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Global Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;

- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;
- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Global Fund, or in the course of adjusting the Global Fund's emphasis(es) on a given country(ies) or sector(s). The Global Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Risk [Heading]	rr_RiskHeading	Principal Risks
Risk Narrative [Text Block]		<p>An investment in the Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):</p> <p>Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Global Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Global Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Global Fund’s portfolio investments, and may affect the Global Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.</p> <p>Borrowing Risk. Borrowing for investment purposes creates leverage, which will exaggerate the effect of any increase or decrease in the Global Fund’s net asset value and, therefore, may increase the volatility of the Global Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Global Fund’s total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Global Fund.</p> <p>Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Global Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Global Fund may incur costs in connection with conversions between various currencies.</p> <p>Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate</p>

inversely with changes in interest rates (i.e. if interest rates increase, the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential income and/or gains from the Global Fund's investments in fixed income securities denominated in a foreign currency. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Global Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Global Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Global Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Emerging Markets Risk. To the extent that the Global Fund invests in issuers located in emerging markets, the foreign securities risk may be heightened. Due to political changes, changes in taxation, or currency controls that could adversely affect investments located in emerging market countries, investments of this nature may be more volatile than investments made in the markets of more developed foreign countries with more mature economies. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. See also Risks Associated with Natural Resources and Commodity Investments.

Foreign Securities Risk. Foreign securities risks to which the Global Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Global Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Global Fund to liquidate positions. This in turn may cause delays in the Global Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a

rr_RiskNarrativeTextBlock

discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange. To the extent that the Global Fund invests in issuers (or depositary receipts of issuers) located in emerging markets, the foreign securities risk may be heightened.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Global Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Global Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Global Fund. Additionally, the Global Fund's direct operations could negatively impact the Global Fund's performance. For instance, because the Global Fund's asset base may be considered small relative to other mutual funds, the Global Fund will operate with correspondingly higher total annual operating expenses. To the extent the Global Fund's assets are not increased and the Global Fund's expense ratios are not decreased, the Global Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Investments in Other Investment Companies. The Global Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Global Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Global Fund will incur higher expenses, many of which may be duplicative. In addition, the Global Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Global Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Natural Resources and Commodity Investments. Should the Global Fund invest in securities of companies involved in oil and gas, timber or mining activities, such investments will involve an increased number of risks, including geological risks, environmental liabilities, governmental regulations, and other risks involved in exploration, mining, distribution and marketing oil, gas, and other minerals, which can result in a higher degree of overall risk for the Global Fund. These companies may be affected by changes in overall market movements, commodity prices, interest rates, or sectors affecting a particular commodity, such as drought, floods, weather, embargoes, tariffs, and international economic, political and regulatory developments.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

Stock Market Risk. The Global Fund's investments will fluctuate in price. This means that the Global Fund's share price will go up and down, and Global Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

- [1] The Global Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Global Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.
- [2] The term "Acquired Fund Fees and Expenses" refers to other investment companies in which the Global Fund invests and represents the pro rata expense indirectly incurred by the Global Fund as a result of investing in other investment companies, including exchange-traded funds ("ETFs"), closed-end funds and money market funds that have their own expenses. The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Global Fund's financial highlights table.

Risk/Return Summary - Commonwealth Real Estate Securities Fund

Commonwealth Real Estate Securities Fund

Commonwealth Real Estate Securities Fund (CNREX)

Investment Objective

The investment objective of the Commonwealth Real Estate Securities Fund (the “Real Estate Securities Fund”) is to provide long-term capital appreciation and current income.

Fees and Expenses of the Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Real Estate Securities Fund.

Shareholder Fees (fees paid directly from your investment)

Shareholder Fees	Commonwealth Real Estate Securities Fund Commonwealth Real Estate Securities Fund
Redemption Fee (as a percentage of the amount redeemed or exchanged within 14 days and a \$15 fee for redemptions paid by wire)	2.00%

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Annual Fund Operating Expenses	Commonwealth Real Estate Securities Fund Commonwealth Real Estate Securities Fund
Management Fee	0.75%
Distribution (12b-1) Fees	0.25% ^[1]
Other Expenses	1.61%
Acquired Fund Fees and Expenses	0.02% ^[2]
Total Annual Fund Operating Expenses	2.63%

[1] The Real Estate Securities Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Real Estate Securities Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.

[2] The term “Acquired Fund Fees and Expenses” refers to other investment companies in which the Real Estate Securities Fund invests and represents the pro rata expense indirectly incurred by the Real Estate Securities Fund as a result of investing in other investment companies, including exchange-traded funds (“ETFs”), closed-end funds and money market funds that have their own expenses. The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Real Estate Securities Fund's financial highlights table.

Example

The following example is intended to help you compare the cost of investing in the Real Estate Securities Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Real Estate Securities Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Real Estate Securities Fund's operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:

Expense Example	1 Year	3 Years	5 Years	10 Years
Commonwealth Real Estate Securities Fund Commonwealth Real Estate Securities Fund USD (\$)	266	817	1,395	2,964

Portfolio Turnover

The Real Estate Securities Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Real Estate Securities Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Real Estate Securities Fund's performance. During the most recent fiscal year, the Real Estate Securities Fund's portfolio turnover rate was 13% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Real Estate Securities Fund invests at least 80% of its net assets in real estate securities. Investments made by the Real Estate Securities Fund are in issuers in real estate and related industries (i.e., those issuers whose fortunes are impacted by the real estate market). The Real Estate Securities Fund invests primarily in equity securities (including common stock and preferred stock and securities convertible into common stock) as well as in the debt securities of companies in real estate industries, which may include commercial and/or residential real estate investment trusts (“REITs”), publicly traded real estate development companies, real estate management companies, building supply companies, timber companies, real property holdings and other publicly-traded companies involved in real estate related activities and industries. The Real Estate Securities Fund may invest in securities denominated in any currency. The Real Estate Securities Fund’s investments may include issuers of any market capitalization. In addition to buying equity and debt securities, the Real Estate Securities Fund may invest in depositary receipts (including American Depositary Receipts (“ADRs”), Global Depositary Receipts (“GDRs”), and European Depositary Receipts (“EDRs”). ADRs are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated.

The Real Estate Securities Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds (“ETFs”). The Real Estate Securities Fund may invest in emerging market countries.

The Real Estate Securities Fund’s investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations (“NRSROs”). The determination as to whether to make a particular investment in debt securities is based on FCA Corp’s, the Real Estate Securities Fund’s investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Real Estate Securities Fund’s debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., “junk bonds”) based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Real Estate Securities Fund may also enter into derivative transactions. The Real Estate Securities Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Real Estate Securities Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Real Estate Securities Fund also may enter into foreign currency forward contracts. The Real Estate Securities Fund may also engage in borrowing for cash management purposes. The Real Estate Securities Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Real Estate Securities Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp evaluates its beliefs and adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company’s growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company’s growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;
- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;
- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Real Estate Securities Fund, or in the course of adjusting the Real Estate Securities Fund’s emphasis(es) on a given sector(s). The Real Estate Securities Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Principal Risks

An investment in the Real Estate Securities Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):

Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Real Estate Securities Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Real Estate Securities Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Real Estate Securities Fund’s portfolio investments, and may affect the Real Estate Securities Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.

Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Real Estate Securities Fund’s net asset

value and, therefore, may increase the volatility of the Real Estate Securities Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Real Estate Securities Fund's total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Real Estate Securities Fund.

Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Real Estate Securities Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Real Estate Securities Fund may incur costs in connection with conversions between various currencies.

Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate inversely with changes in interest rates (i.e. if interest rates increase the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Real Estate Securities Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Real Estate Securities Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Real Estate Securities Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Real Estate Securities Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Emerging Markets Risk. To the extent that the Real Estate Securities Fund invests in issuers located in emerging markets, the foreign securities risk may be heightened. Due to political changes, changes in taxation, or currency controls that could adversely affect investments located in emerging market countries, investments of this nature may be more volatile than investments made in the markets of more developed foreign countries with more mature economies. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. See also Risks Associated with Natural Resources and Commodity Investments.

Foreign Securities Risk. Foreign securities risks to which the Real Estate Securities Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Real Estate Securities Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Real Estate Securities Fund to liquidate positions. This in turn may cause delays in the Real Estate Securities Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less liquid than the underlying securities listed on an exchange. To the extent that the Fund invests in issuers (or depositary receipts of issuers) located in emerging markets, the foreign securities risk may be heightened.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Real Estate Securities Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Real Estate Securities Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Real Estate Securities Fund. Additionally, the Real Estate Securities Fund's direct operations could negatively impact the Fund's performance. For instance, because the Real Estate Securities Fund's asset base may be considered small relative to other mutual funds, the Real Estate Securities Fund will operate with correspondingly higher total annual operating expenses. To the extent the Real Estate Securities Fund's assets are not increased and the Real Estate Securities Fund's expense ratios are not decreased, the Real Estate Securities Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Investments in Other Investment Companies. The Real Estate Securities Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Real Estate Securities Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Real Estate Securities Fund will incur higher expenses, many of which may be duplicative. In addition, the Real Estate Securities Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Real Estate Securities Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Real Estate Investment Trusts. The Real Estate Securities Fund may invest in equity interests or debt obligations issued by REITs. REITs are pooled investment vehicles which invest primarily in income producing real estate or real estate related loans or interests. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling property that has appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. Similar to investment companies, REITs are not taxed on income distributed to shareholders provided they comply with certain requirements of the Internal Revenue Code of 1986, as amended (the "Code"). The Real Estate Securities Fund will indirectly bear its proportionate share of expenses incurred by REITs in which the Fund invests in addition to the expenses incurred directly by the Real Estate Securities Fund. The Real Estate Securities Fund will be subject to risks similar to those associated with the direct ownership of real estate, including: declines in the value of real estate, risks related to general and local economic conditions, dependency on management skill, heavy cash flow dependency, possible lack of availability of mortgage funds, overbuilding, extended vacancies of properties, increased competition, increases in property taxes and operating expenses, changes in zoning laws, losses due to costs resulting from the clean-up of environmental problems, liability to third parties for damages resulting from environmental problems, casualty or condemnation losses, limitations on rents, changes in neighborhood values and the appeal of properties to tenants, changes in interest rates and changes in the tax laws.

Additionally, equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skills, are not diversified, are subject to heavy cash flow dependency, default by borrowers and self-liquidation. REITs are also subject to the possibilities of failing to qualify for tax free pass-through of income under the Code and failing to maintain their exemption from registration under the Investment Company Act of 1940, as amended (the "1940 Act").

REITs (especially mortgage REITs) are also subject to interest rate risks. When interest rates decline, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. In contrast, as interest rates on adjustable rate mortgage loans are reset periodically, yields on a REIT's investment in such loans will gradually align themselves to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations.

Investments in REITs also involve the following risks: limited financial resources, infrequent or limited trading, and abrupt or erratic price movements.

Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.

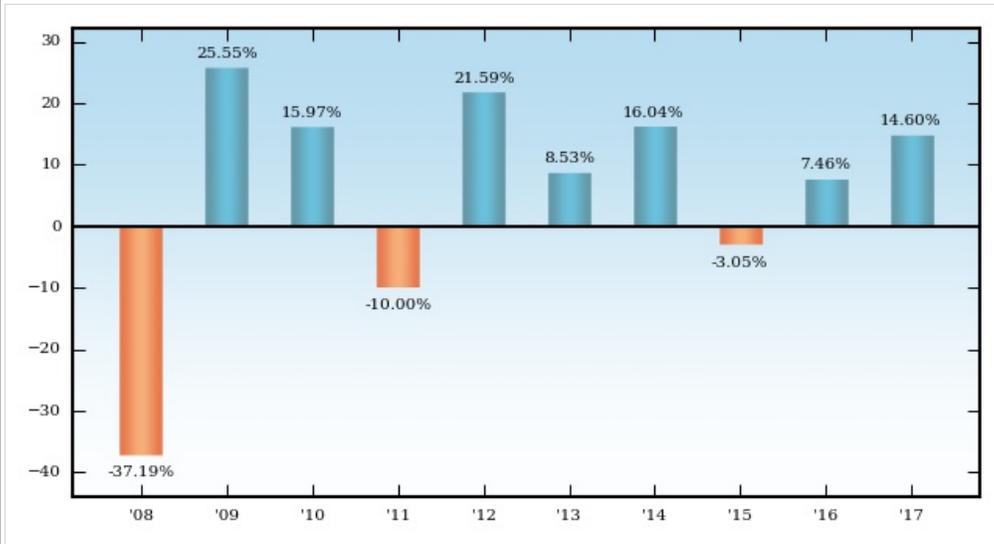

Stock Market Risk. The Real Estate Securities Fund's investments will fluctuate in price. This means that the Real Estate Securities Fund's share price will go up and down, and Real Estate Securities Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.

FUND'S PAST PERFORMANCE

The bar chart and performance table that follows illustrate the variability of the Real Estate Securities Fund's returns. The Real Estate Securities Fund's past performance (before and after taxes) does not necessarily indicate how the Real Estate Securities Fund will perform in the future. The information provides some indication of the risks of investing in the Real Estate Securities Fund by showing changes in its performance from year to year over the life of the Fund and by showing how its average annual returns for 1-year, 5-year, and 10-year periods compare with those of a broad measure of market performance. The performance of the comparative index does not reflect deductions for fees, expenses or taxes. Updated performance information, current through the most recent month end, is available on the Real Estate Securities Fund's website at www.commonwealthfunds.com.

REAL ESTATE SECURITIES FUND

Year-by-year return as of 12/31 each year (%)

For the periods included in the bar chart:

BestQuarter 23.12%, 2nd Quarter, 2009

WorstQuarter (28.77)%, 4th Quarter, 2008

Average Annual Total Returns for the Period Ended December 31, 2017

Average Annual Total Returns - Commonwealth Real Estate Securities Fund	1 Year	5 Year	10 Years
Commonwealth Real Estate Securities Fund	14.60%	8.50%	4.17%
Commonwealth Real Estate Securities Fund Return After Taxes on Distributions	14.51%	8.40%	4.13%
Commonwealth Real Estate Securities Fund Return After Taxes on Distributions and Sale of Fund Shares	8.34%	6.70%	3.30%
MSCI US REIT Index (reflects no deduction for fees, expenses or taxes)	5.06%	9.34%	7.44%

After-tax returns are calculated using the historical highest federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on the investor's tax situation and may differ from those shown, and the after-tax returns shown are not relevant to investors who hold their Real Estate Securities Fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

Objective [Heading]	rr_ObjectiveHeading	Investment Objective
Objective, Primary [Text Block]	rr_ObjectivePrimaryTextBlock	The investment objective of the Commonwealth Real Estate Securities Fund (the “Real Estate Securities Fund”) is to provide long-term capital appreciation and current income.
Expense [Heading]	rr_ExpenseHeading	Fees and Expenses of the Fund
Expense Narrative [Text Block]	rr_ExpenseNarrativeTextBlock	This table describes the fees and expenses you may pay if you buy and hold shares of the Real Estate Securities Fund.
Shareholder Fees Caption [Text]	rr_ShareholderFeesCaption	Shareholder Fees (fees paid directly from your investment)
Operating Expenses Caption [Text]	rr_OperatingExpensesCaption	Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)
Portfolio Turnover [Heading]	rr_PortfolioTurnoverHeading	Portfolio Turnover
Portfolio Turnover [Text Block]	rr_PortfolioTurnoverTextBlock	The Real Estate Securities Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Real Estate Securities Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Real Estate Securities Fund’s performance. During the most recent fiscal year, the Real Estate Securities Fund’s portfolio turnover rate was 13% of the average value of its portfolio.
Portfolio Turnover, Rate	rr_PortfolioTurnoverRate	13.00%
Expenses Not Correlated to Ratio Due to Acquired Fund Fees [Text]	rr_ExpensesNotCorrelatedToRatioDueToAcquiredFundFees	The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Real Estate Securities Fund’s financial highlights table.
Expense Example [Heading]	rr_ExpenseExampleHeading	Example
Expense Example Narrative [Text Block]	rr_ExpenseExampleNarrativeTextBlock	The following example is intended to help you compare the cost of investing in the Real Estate Securities Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Real Estate Securities Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Real Estate Securities Fund’s operating expenses remain the same. Although, your actual costs may be higher or lower, based on these assumptions your costs would be:
Strategy [Heading]	rr_StrategyHeading	Principal Investment Strategies
Strategy Narrative [Text Block]		Under normal market conditions, the Real Estate Securities Fund invests at least 80% of its net assets in real estate securities. Investments made by the Real Estate Securities Fund are in issuers in real estate and related industries (i.e., those issuers whose fortunes are impacted by the real estate market). The Real Estate Securities Fund invests primarily in equity securities (including common stock and preferred stock and securities convertible into common stock) as well as in the debt securities of companies in real estate industries, which may include commercial and/or residential real estate investment trusts (“REITs”), publicly traded real estate development companies, real estate management companies, building supply companies, timber companies, real property holdings and other publicly-traded companies involved in real estate related activities and industries. The Real Estate Securities Fund may

rr_StrategyNarrativeTextBlock

invest in securities denominated in any currency. The Real Estate Securities Fund's investments may include issuers of any market capitalization. In addition to buying equity and debt securities, the Real Estate Securities Fund may invest in depositary receipts (including American Depositary Receipts ("ADRs"), Global Depositary Receipts ("GDRs"), and European Depositary Receipts ("EDRs")). ADRs are dollar-denominated depositary receipts that, typically, are issued by a United States bank or trust company and represent the deposit with that bank or trust company of a security of a foreign issuer. Generally, ADRs are designed for trading on U.S. securities exchanges or other markets. The Fund may also invest in EDRs, GDRs and in similar instruments representing foreign-traded depositary interests in securities of foreign companies. EDRs are receipts issued by a European financial institution evidencing arrangements similar to ADRs. EDRs are generally designed for use in European securities markets. GDRs are receipts for foreign-based corporations that are traded in capital markets around the world. These depositary receipts may be sponsored or unsponsored. The depositary receipts in which the Fund invests are U.S. dollar-denominated.

The Real Estate Securities Fund may invest in shares of other investment companies, including open-end and closed-end funds and exchange-traded funds ("ETFs"). The Real Estate Securities Fund may invest in emerging market countries.

The Real Estate Securities Fund's investments in debt securities may include obligations of governmental issuers, commercial paper and other companies regardless of credit quality and regardless of whether such securities are rated or unrated by nationally recognized statistical rating organizations ("NRSROs"). The determination as to whether to make a particular investment in debt securities is based on FCA Corp's, the Real Estate Securities Fund's investment adviser, analysis of the risk of the debt security versus the price and return of such debt security. The Real Estate Securities Fund's debt investments may include securities that are viewed as being of a credit quality that is below investment-grade (i.e., "junk bonds") based on ratings established by NRSROs regardless of whether such debt security is rated or not.

The Real Estate Securities Fund may also enter into derivative transactions. The Real Estate Securities Fund may use derivative transactions for any purpose consistent with its investment objective, such as for hedging, obtaining market exposure, and generating premium income. The Real Estate Securities Fund may purchase or sell (write) exchange-traded put or call options on stocks or stock indices. The Real Estate Securities Fund also may enter into foreign currency forward contracts. The Real Estate Securities Fund may also engage in borrowing for cash management purposes. The Real Estate Securities Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Real Estate Securities Fund may borrow up to one-third of its total assets.

FCA Corp has long-term investment goals and its process seeks to identify potential portfolio investments that can be held over an indefinite time horizon. FCA Corp evaluates its beliefs and adjusts portfolio holdings in light of prevailing market conditions and other factors, including, among other things, economic, political, or market events, changes in relative valuations (to both a company's growth prospects and to other issuers), and liquidity requirements. In selecting investments for the Fund, FCA Corp will assess factors it deems relevant and applicable under the particular circumstances, including, among others:

- Potential for capital appreciation (to both a company's growth prospects and to other issuers);
- Earnings growth potential and/or sustainability;
- Price of security relative to historical and/or future cash flow;
- Sustainable franchise value;
- Price of a security relative to price of underlying stock, if a convertible security;

- Yield on security relative to yield of other fixed-income securities;
- Interest or dividend income;
- Call and/or put features;
- Price of a security relative to price of other comparable securities;
- Size of issue; and
- Impact of security on diversification of the portfolio.

FCA Corp will also seek to sell a security when it believes its price is unlikely to appreciate longer term, other comparable investments offer better opportunities for the Real Estate Securities Fund, or in the course of adjusting the Real Estate Securities Fund’s emphasis(es) on a given sector(s). The Real Estate Securities Fund generally invests in equity securities with the view to hold them long-term and debt securities to hold to maturity.

Strategy Portfolio Concentration [Text]	rr_StrategyPortfolioConcentration	Under normal market conditions, the Real Estate Securities Fund invests at least 80% of its net assets in real estate securities.
Risk [Heading]	rr_RiskHeading	Principal Risks
Risk Narrative [Text Block]		<p>An investment in the Real Estate Securities Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency. In addition, the Fund is subject to the following principal risks (presented alphabetically):</p> <p>Abusive Trading Activities. Frequent short-term purchases, redemptions or exchanges in Real Estate Securities Fund shares (sometimes referred to as “market timing” or “frequent trading activities”) may result in a dilution in the value of Real Estate Securities Fund shares for other shareholders. Such activity may create transaction costs that are borne by all shareholders, may disrupt the orderly management of the Real Estate Securities Fund’s portfolio investments, and may affect the Real Estate Securities Fund’s cost and performance for other shareholders. The Board of Trustees has adopted policies to discourage abusive trading activities and has approved procedures to implement those policies. There is no guarantee that these procedures can detect or prevent all abusive trading activities and, therefore, such activities may occur.</p> <p>Borrowing Risk. Borrowing creates leverage, which will exaggerate the effect of any increase or decrease in the Real Estate Securities Fund’s net asset value and, therefore, may increase the volatility of the Real Estate Securities Fund. Money borrowed will be subject to interest and other costs (that may include commitment fees) which may reduce the Real Estate Securities Fund’s total return. Unless the income and capital appreciation, if any, exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Real Estate Securities Fund.</p> <p>Currency Risk. Investments that are denominated in a currency other than the U.S. dollar, or currency-related derivative instruments, are subject to the risk that the value of a particular currency will change in relation to one or more other currencies including the U.S. dollar. When the Real Estate Securities Fund conducts securities transactions in a foreign currency, there is the risk of the value of the foreign currency increasing or decreasing against the value of the U.S. dollar. The value of an investment denominated in a foreign currency will decline in dollar terms if that currency weakens against the U.S. dollar. Risks associated with currency may also be exacerbated by foreign government exchange controls which may include, among others, banning the use of foreign currency within the country, fixed exchange rates, restricting currency exchange to government-approved exchangers, and restrictions on the amount of currency that may be imported or exported. In addition, the Real Estate Securities Fund may incur costs in connection with conversions between various currencies.</p> <p>Debt Securities Risk. Investments in debt and/or fixed income securities tend to fluctuate</p>

inversely with changes in interest rates (i.e. if interest rates increase the price of debt securities will generally decline). Changes in an issuer's financial strength or creditworthiness also can affect the value of the securities it issues. Convertible and preferred stocks, which have some characteristics of both equity and fixed income securities, also contain, to varying degrees depending on their structure, the associated risks of each. The Real Estate Securities Fund may invest in securities rated investment-grade or below investment-grade ("junk bonds"), and it may invest in debt securities that are of comparable quality that are not rated. The Real Estate Securities Fund could lose money or experience a lower rate of return if it holds junk bonds that are subject to higher credit risks and are less liquid than other fixed income or debt instruments. Junk bonds are often considered speculative and have significantly higher credit risk than investment-grade bonds.

Derivatives Risk. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. If the Real Estate Securities Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. Over-the-counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Real Estate Securities Fund. Other risks of investments in derivatives include imperfect correlation between the value of these instruments and the underlying assets; risks that the transactions may result in losses that offset gains in portfolio positions; and risks that the derivative transactions may not be liquid.

Emerging Markets Risk. To the extent that the Real Estate Securities Fund invests in issuers located in emerging markets, the foreign securities risk may be heightened. Due to political changes, changes in taxation, or currency controls that could adversely affect investments located in emerging market countries, investments of this nature may be more volatile than investments made in the markets of more developed foreign countries with more mature economies. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. See also Risks Associated with Natural Resources and Commodity Investments.

Foreign Securities Risk. Foreign securities risks to which the Real Estate Securities Fund will be exposed include differences in securities markets in other countries, in tax policies, in the level of regulation and in accounting standards, as well as risks associated with fluctuations in currency values. Further, there is often less publicly available information about foreign issuers, and there is the possibility of negative governmental actions and of political and social unrest. The Real Estate Securities Fund may not be able to participate in rights and offerings that are not registered for sale to a U.S. investor. Securities in foreign markets also are generally less liquid and have greater price fluctuation than is typical in the U.S. for securities of comparable issuers. Transactions in foreign securities generally involve currency exchange cost and risk and often take longer to settle than do securities in the U.S., which may make it more difficult for the Real Estate Securities Fund to liquidate positions. This in turn may cause delays in the Real Estate Securities Fund's receipt of proceeds and an associated loss of potential dividend and interest income or the incurrence of interest cost on debt incurred to cover the period required until the receipt of the proceeds of these same securities. Although depositary receipts provide a convenient means to invest in non-U.S. securities, such investments involve risks generally similar to investments directly in foreign securities. The issuers of unsponsored depositary receipts may not receive information from the foreign issuer, and it is under no obligation to distribute shareholder communications or other information received from the foreign issuer of the deposited securities or to pass through voting rights to the holders of the depositary receipts. It may not be possible to hedge the risk of currency fluctuations in foreign countries. Additionally, although depositary receipts have risks similar to the securities that they represent, they may involve higher expenses, may trade at a discount (or premium) to the underlying security, may not pass through voting and other shareholder rights, and may be less

rr_RiskNarrativeTextBlock

liquid than the underlying securities listed on an exchange. To the extent that the Fund invests in issuers (or depositary receipts of issuers) located in emerging markets, the foreign securities risk may be heightened.

Management Risk. FCA Corp's judgments about the attractiveness and potential appreciation of a security may prove to be inaccurate and may not produce the desired results. Additionally, FCA Corp's reliance on investment strategy judgments about the "growth" potential of particular companies or the relative "value" of particular securities may prove to be incorrect or inconsistent with the overall market's assessment of these characteristics, which may result in lower-than-expected returns.

Operational Risk. The ability of the Real Estate Securities Fund to achieve its investment objective is contingent on a variety of factors, and perhaps most importantly, the ability of FCA Corp to implement the Real Estate Securities Fund's strategies effectively and efficiently. Any of these factors could negatively affect the performance of the Real Estate Securities Fund. Additionally, the Real Estate Securities Fund's direct operations could negatively impact the Fund's performance. For instance, because the Real Estate Securities Fund's asset base may be considered small relative to other mutual funds, the Real Estate Securities Fund will operate with correspondingly higher total annual operating expenses. To the extent the Real Estate Securities Fund's assets are not increased and the Real Estate Securities Fund's expense ratios are not decreased, the Real Estate Securities Fund's expenses will detract from its performance more significantly than with other mutual funds.

Risks Associated with Investments in Other Investment Companies. The Real Estate Securities Fund may invest in shares of other investment companies, including open-end funds and closed-end funds and ETFs. When the Real Estate Securities Fund invests in other investment companies and ETFs, it will indirectly bear its proportionate share of any fees and expenses payable directly by the other investment company. Therefore, the Real Estate Securities Fund will incur higher expenses, many of which may be duplicative. In addition, the Real Estate Securities Fund may be affected by losses of the underlying funds and the level of risk arising from the investment practices of the underlying funds (such as the use of derivative transactions by the underlying funds). ETFs and closed-end funds are subject to additional risks such as, its shares may trade above or below its net asset value or an active market may not develop. The Real Estate Securities Fund has no control over the investments and related risks taken by the underlying funds in which it invests.

Risks Associated with Real Estate Investment Trusts. The Real Estate Securities Fund may invest in equity interests or debt obligations issued by REITs. REITs are pooled investment vehicles which invest primarily in income producing real estate or real estate related loans or interests. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling property that has appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. Similar to investment companies, REITs are not taxed on income distributed to shareholders provided they comply with certain requirements of the Internal Revenue Code of 1986, as amended (the "Code"). The Real Estate Securities Fund will indirectly bear its proportionate share of expenses incurred by REITs in which the Fund invests in addition to the expenses incurred directly by the Real Estate Securities Fund. The Real Estate Securities Fund will be subject to risks similar to those associated with the direct ownership of real estate, including: declines in the value of real estate, risks related to general and local economic conditions, dependency on management skill, heavy cash flow dependency, possible lack of availability of mortgage funds, overbuilding, extended vacancies of properties, increased competition, increases in property taxes and operating expenses, changes in zoning laws, losses due to costs resulting from the clean-up of environmental problems, liability to third parties for damages resulting from environmental problems, casualty or condemnation losses, limitations on rents, changes in neighborhood values and the appeal of properties to tenants, changes in interest rates and changes in the tax laws.

		<p>Additionally, equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skills, are not diversified, are subject to heavy cash flow dependency, default by borrowers and self-liquidation. REITs are also subject to the possibilities of failing to qualify for tax free pass-through of income under the Code and failing to maintain their exemption from registration under the Investment Company Act of 1940, as amended (the "1940 Act").</p> <p>REITs (especially mortgage REITs) are also subject to interest rate risks. When interest rates decline, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. In contrast, as interest rates on adjustable rate mortgage loans are reset periodically, yields on a REIT's investment in such loans will gradually align themselves to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations.</p> <p>Investments in REITs also involve the following risks: limited financial resources, infrequent or limited trading, and abrupt or erratic price movements.</p> <p>Small Capitalization Risk. Investing in small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, smaller management groups, and a more limited trading market for their stocks as compared with larger companies. In addition, the earnings and prospects of smaller companies may be more volatile than those of larger companies and smaller companies may experience higher failure rates than do larger companies.</p> <p>Stock Market Risk. The Real Estate Securities Fund's investments will fluctuate in price. This means that the Real Estate Securities Fund's share price will go up and down, and Real Estate Securities Fund shareholders can lose money. Investments in stocks of any type involve risk because stock prices have no guaranteed value. Stock prices may fluctuate in response to various factors, including market conditions, political and other events, and developments affecting the particular issuer or its industry or geographic segment.</p>
Risk Lose Money [Text]	rr_RiskLoseMoney	The Real Estate Securities Fund's investments will fluctuate in price. This means that the Real Estate Securities Fund's share price will go up and down, and Real Estate Securities Fund shareholders can lose money.
Risk Not Insured Depository Institution [Text]	rr_RiskNotInsuredDepositoryInstitution	An investment in the Real Estate Securities Fund may lose value and is not guaranteed or insured by a bank, the Federal Deposit Insurance Corporation, or any other government agency.

[1] The Real Estate Securities Fund has adopted a Rule 12b-1 Plan that permits it to pay up to 0.35% of its average net assets each year. The Board of Trustees has adopted a resolution to spend not more than 0.25% of the Real Estate Securities Fund's average net assets under the Rule 12b-1 Plan until, at the earliest, March 1, 2019.

[2] The term "Acquired Fund Fees and Expenses" refers to other investment companies in which the Real Estate Securities Fund invests and represents the pro rata expense indirectly incurred by the Real Estate Securities Fund as a result of investing in other investment companies, including exchange-traded funds ("ETFs"), closed-end funds and money market funds that have their own expenses. The Total Annual Fund Operating Expenses will not correlate to the ratio of net expenses to average net assets in the Real Estate Securities Fund's financial highlights table.
